J-Teck3's diverse J-Cube range dominates at FESPA Digital

31st March 2016 – This year's FESPA Digital saw visitors to the J-Teck3 stand, hail the company's most diverse premium ink range, J-Cube, the product of choice from its wide portfolio of sublimation ink for transfer printing.

Offering an extensive gamut of vivid colours including striking fluorescents and varying shades of black, J-Cube equips textile companies with superior colour combinations and the capabilities to produce premium fabric products. Manufactured using J-Teck3's unique Cluster Technology, the water-based piezo inks enable supreme printability, fast-drying and high quality image definition when used with high-speed digital printers equipped with Kyocera, Ricoh, Konica Minolta and Panasonic print heads. Available for either transfer or direct-to-fabric printing, the inks' versatility span a vast array of polyester applications including fashion and home decorations.

The company's impressive stand also secured interest in J-Next, the company's bestselling product line, fully-compatible with Epson print heads. Designed as the next generation inks for digital sublimation and direct printing on polyester and synthetic fabrics, the line provides vibrant, high-quality colours. This range includes the J-Next Subly Extra providing high-performance, eye-catching colour for coated and uncoated papers as well as the J-Next Print which incorporates disperse dye for printing directly onto polyester for high fashion and display graphics.

According to Rosaria Pozzoni, Business Operations Manager at J-Teck3, with a surge of business worldwide, including from American and Asian companies, FESPA Digital proved to be another successful show for the company.

She explains: "As a key player in the digital textile market, FESPA Digital has always provided a worldwide platform for us to exhibit our product portfolio. With the show growing year on year, we are seeing exponential growth of companies adopting our premium inks and we are excited to see what FESPA Brasil and FESPA Eurasia holds."

J-Teck3 will continue to develop innovative and sustainable products for sublimation and direct-to-fabric printing.
