

EFI will feature a 180-cm EFI Reggiani ReNOIR ONE printer, which offers improved print quality with new ink feeding and recovery systems, and superior imaging resolutions for efficient, high-quality décor and apparel sampling and production. The printer can do high-quality production without steaming or washing using a new All-In Green Printing Process. The new process allows for superior printing definition, color intensity, and dry and wet rub-fastness. The process uses bio-compatible, non-toxic and non-allergenic chemicals in pre-treatment, followed by wet-on-wet printing. The All-In Green Printing Process saves energy and energy costs, while guaranteeing a soft hand touch.

ITMA Asia visitors can also learn about new EFI Reggiani AQUA reactive inks, which provide a safer printing process while extending ink head life. The water-based AQUA reactive inks are designed for use with Kyocera printhead technology that provides high-end digital printing capabilities on EFI Reggiani machines. Users gain consistently high quality backed by an experienced EFI Reggiani support team offering extensive knowledge and full technological support.
