

Hot Jointair for knotless joining of sythetic and wool yarn

When yarn breaks there are only two options: tie a knot or splice it knotless.

Mesdan splicing solutions in both hand-operated and automatic versions aim to improve production efficiency, increase yarn quality, optimise yarn clearing performances, widen machine versatility and reduce waste. The ultimate goal is to produce a defect-free fabric.

The Hot Jointair is the most advanced splicing solution for wool yarns as well as for luxury yarns such as cashmere, silk, angora, vicunha, etc. Furthermore, it enables superior quality joints on a variety of other “difficult” yarns such as MVS/Vortex yarns, synthetic OE (single and plied), multiply sewing threads and so on.

The Hot Jointair is on display at ITMA (Barcelona, 2019, June 20-26) at the Mesdan stand n. A210b in H7 hall, together with the full range of yarn splicers as well as **Laboratory equipment** for spinning.

For more information about Hot Jointair and other Mesdan-Lab products please contact Mesdan:
