Aigle Macchine is a consolidated industrial reality on the market of machines for the production of plants for textile finishing, coating, laminating and flocking for more than 60 years.

As regards the coating sector, Aigle operates in the clothing, laminating, furnishings (backcoats for carpets, fireproof and waterproofing treatments, etc.) and technical fabrics (conveyor belts, geotextiles, truck tarpaulins, advertising banners, and so on) In the textile market, as far as flocking is concerned, Aigle is a leader in the sector of production of flocking systems for materials in rolls (fabrics, paper, plastic films, etc.) Aigle Macchine is a consolidated industrial reality on the market of machines for the production of plants for textile finishing, coating, laminating and flocking for more than 60 years.

As regards the coating sector, Aigle operates in the clothing, laminating, furnishings (backcoats for carpets, fireproof and waterproofing treatments, etc.) and technical fabrics (conveyor belts, geotextiles, truck tarpaulins, advertising banners, and so on) In the textile market, as far as flocking is concerned, Aigle is a leader in the sector of production of flocking systems for materials in rolls (fabrics, paper, plastic films, etc.) AIGLE designs, manufactures and sells complete plants all over the world both with the turnkey formula and as individual lines and/or machines.

Aigle ensures a complete service regarding technological assistance. Specialized technicians work alongside the customer from the very first contacts to propose the most up-to-date technical and technological solutions, using their own experience and relying on research, development and implementation of tailor-made solutions.

For 50 years, Bianco® has been designing and manufacturing machinery with advanced technology for textile finishing, for the technical textile industry and for the non-woven sector. Founded in 1974, Bianco® is still a dynamic company, with a wealth of history and professionalism. It employs designers with great experience, passion, absolute dedication and unparalleled technical competence.

With over 40,000 installations worldwide and 30 registered patents, Bianco® proudly reaches 50 years excellence in textiles in 2024.

Bianco® offers a range that boasts more than 10 families of machines and accessories for the textile sector, entirely designed and manufactured in Alba (CN), within the TCN Group® industrial center. The Bianco® reality is a qualified expression of Made in Italy, always at the forefront with its research and development department, constantly engaged in experimenting with new products, with an increasingly high technological value.

Cubotex was born in 1984 after the invention of a new internationally patented machine for dyeing hosiery and stockings. After becoming world leader in this particular field, since the early 90s, the company started the production of today's core business: dyeing machinery for bobbins, tops, fiber, tow and hanks (skeins).

Continuous technical innovations and research brought to deposit several patents and make of all Cubotex customers partners in development and research of excellence in the machinery design and performance.

OUR PRODUCTION

High technology machines for the process of technical fabrics, non-woven, plastic, film, individual machines, solution off-line and in-line for

FOLLOWING SECTORS:

medical, geotextile, converting,
agriculture, automotive, batteries

MAIN MACHINES MANUFACTURED

coating machine, hot melt

- high speed slitting machine
- axial and tangential rewinding for end-lines
- packing machines for small products and big rolls
- winding/roll-up devices in very large width up to 7 mts
- winding multilayer with continuous ultrasonic welding
- inspection, doubling/folding machine in very large width up to 7 mts
- automation and robotisation for fabric inspection and packing
- winding machines for all types of fabric up to 6 mts. width, "in-line" "off-line"
- rewinding and packing for converting sector, small rolls

INDUNO OLONA (VA)
Tel: +39 0332 203037
E-mail: etv@etvsrl.com
Web: www.etvsrl.com

ETV Elettronica Tessile Varese started our business more than 50 years ago, developing the first inventive measuring instruments to assess residual moisture and to determine shrinkage speed in yarns and fabrics.

And all this with electronics which we would now look as "primitive". Today we set up close relationships with many international manufacturers dealing with staple and finished textiles.

Thanks to a combination of skilled technicians and all the use of advanced technology, we are in a position to solve, in a targeted and precise way, any problem put forward by our customers in the textile industry.

As a company, we deal with the design, implementation, testing and installation of our own equipment, as well as related sensors and the after-sales assistance. In particular devices for on-line measurement of the residual moisture of the fabric and yarn, and the temperature of the fabric and the exhaust air.

The oldest company leader in the production of precision winder machines, still owned and run by the same family and producing 100 % Made in Italy !

Fadis was founded in 1960 with the purpose of manufacturing textile machines such as rewinders, soft winders, assembly winders, hank to cone winders, reeling machines, spooling machines, cops winding machines, air covering machines and air texturing machines which are meant to process all types of yarns such as cotton, wool, silk, artificial fibres, synthetic fibres, mixed fibres, intermingled yarns, fancy yarns.

Fadis is present in more than 70 countries all over the world. The last generation of precision winding machines clearly shows the importance we give to innovation, research and development of new models, new products, new materials, new technologies and with introduction of automation with cobot to enhance end user efficiency and productivity. All Fadis machines are "Digital ready" with a maximum recyclability potencial of more than 80 %.

Since 1951 world leader in the production of finishing equipment for woven and knitted fabrics open and tubular, compactors unit, sanforizing lines, calenders and open width de-oiling and scouring units.

Always focused on innovation, we have introduced a number of new models such as **FerrSonic**, the scouring and oil removal unit which utilizes customized ultrasound technology, specifically designed for continuous washing process such as scouring, that boosts the cleaning power of the water in the washing treatment, achieving an amazing reduction of chemicals used (up to 65%!) and up to 30% to 50% less water with a shorter washing time. Or again, like the innovative Vacuum **Self-Cleaning Strainer (SCS)**, a new advance technology continuous filtering system capable to clean the whole batch of the washing tank every single minute, equipped also with a special compact oil separator device to drain out all the removed impurities.

Machines designed and built to last, where innovation and energy efficiency have always been our main lines of development.

FIMAT

FIMAT S.R.L.
 Via Leonardo da Vinci, 6
 22041 COLVERDE (CO)
 Tel: +39 031 550122
 E-mail: info@fimatitaly.it
 Web: www.fimatitaly.it

With a view to contributing to the sustainability of the production of printed, coated and dyed fabrics, FIMAT SRL, founded in 1986, offers a series of consolidated solutions that contribute to the optimization of consumption, the traceability of quality and the reduction of waste.

With its recognized and proven specialist experience at national and international level, FIMAT has established itself both in the sector of precision colour dosing and in the production of accessory machines for the printing, textile finishing and coating sectors.

In the specialized field of colour kitchens, it has implemented a new construction concept that has allowed the system to be created with the typical construction criteria of a machine, bringing significant advantages in terms of speed of installation and start-up, without obviously neglecting precision, repeatability, speed of execution, simplicity of use and easy maintenance.

In parallel and always with the “skid” concept, an automatic system for the preparation of thickeners and/or neutral bases has been added to the colour kitchen, able to perform recipes starting from both liquid and powder products. All this, together with compliance with Industry 4.0 requirements, contributes significantly to the generation of added value, due to the optimization of the quality of textile products, and to the reduction of consumption and waste of raw materials.

FIMAT also produces a wide range of accessory machines for colour kitchens: colour dissolvers/mixers, washing machines for all types of drums for coloured paste, for rotary screens, flat-bed screens and printing squeegees, all with low water consumption, as well as a complete line of equipment for the photoengraving of flat-bed and rotary printing screens.

Since 1977, the IMA brand has been synonymous with excellence and innovation in the Clothing Industry machinery sector.

With over forty-eight years of experience, we have strengthened our position as a leader both nationally and internationally, offering advanced cutting and spreading machines, fabric rolls handling and management systems, layers labelling, as well as digitalization solutions and textile CAD system, and dedicated software to optimize the organization of the Cutting Room. Our solutions now extend well beyond the fashion and clothing sector, encompassing the nautical, furniture, automotive, and medical fields.

Thanks to our extensive experience, combined with the freshness and dynamism of a young and highly motivated team, we continue to pave the way of innovation. We were pioneers of digital technology with the launch of the first full-digital electronic spreader in 2013, and today we are a leader in Industry 4.0 with a fully digitalized, automated, and interconnected Cutting Room. Our technology not only optimizes performance and reduces consumption, but also aims at a sustainable resource use, placing a strong emphasis on environmental responsibility and the future.

Tel: +39 035 7282111

E-mail: info@itemagroup.com

Web: www.itemagroup.com

Itema is a leading global provider of advanced weaving solutions. The company is the only manufacturer in the world to provide the top three weft insertion technologies: rapier, airjet and projectile, with an ample product portfolio and a commitment to continuous innovation and technological advancement of our weaving machines.

Itema Group is also active in the industrial sector through Schoch®, a manufacturer of accessories for the textile industry, and Lamiflex®, supplier of composite material components intended for the textile machinery, industrial, aerospace and medical sectors. It also has a stake in Tofflonit, the Italian headquarters of the Asian biopharmaceutical giant Tofflon. Itemalab®, Itema's advanced research incubator, also offers transversal systems engineering and business process re-engineering services to third parties.

Itema Group has more than 1000 employees worldwide and features two production sites for the core weaving business in Italy, one in Switzerland and one in China. Itema is present throughout the world with sales, after-sales assistance, and training offices in Italy, Switzerland, China, India, Japan, USA, Hong Kong and Turkey, and through a network of agents and distributors in more than 70 countries.

For more information about Itema, to contact the Sales Team in your country, to learn more about our weaving machines or to order spare parts, please visit our website www.itemagroup.com.

LAFER

LAFER S.P.A.

Via Lago di Garda, 98

36015 SCHIO (VI)

Tel: +39 0445 694320

E-mail: sales@laferspa.com

Web: www.laferspa.com

Lafer's objective is to create finishing machines with premium build quality that control fabrics with the highest precision.

Together with mechanical engineering, Lafer's in-house electronic and software development team always strive for more advanced integration of moving parts, electronics and operating software.

- Lafer raising machines have the highest productivity.
- Shearing machines have custom made shearing groups to maximize cutting precision.
- Various versions of felt compactors also integrated with mechanical metal shoe type compacting modules maximize setting precision of compaction action and preserve the original 3D knit fabric appearance or if preferred a rubber belt sanforizing unit will give a flatter look with more lustre.

- Lafer supplies different versions of sueding machines for knits and wovens for finer or more dense (warmer) effects.

Various wet finishing processes have also been developed:

- Wet sueding for the smoothest (cleanest) effect.
- Open width enzyme treatment for a more uniform and effective results than rope form processing.
- Closed loop waterless scouring for 100% synthetic stretch fabric with zero discharge
- Liquid ammonia mercerizing with versions for knits and wovens. Lafer continues to seek the most precise control of fabric tension management, finishing parameters and transport to improve quality.

Lawer is an example of Italian excellence, a worldwide leader in the development of industrial dosing systems with over 50 years of experience in the field. Our firm was established in 1970 in the district of Biella, heart of the Italian textile industry, historical home to various enterprises well known for the manufacturing of finest quality cloths and fabrics. This provided the perfect environment for our growth and shaped our mission from the very beginning: the development of highest quality and efficient dosing solutions combining safety and sustainability.

Our constant investments in R&D and modern technologies have led us to the pioneering of novel and reliable dispensing systems, which coupled to our flexible and effective support and technical service, have won us the trust of several renowned textile firms at international level. Currently there are over 2600 Lawer automated dosing systems installed and operating around the world.

Our systems guarantee high accuracy, daily repeatability and maximum efficiency in all the dosing and dispensing operations of colors and products, in both powdery and liquid forms, found across many dyeing and finishing textile processes. Lawer's entire production is "100% Made in Italy" and based in Cossato (Biella district) where 120 highly skilled technicians and engineers are contributing to the realization of our mission supported by some of the most modern and advanced manufacturing technologies.

Tel: +39 031 471199
E-mail: r.gerletti@loptex.it
Web: www.loptex.it

Loptex specializes in designing, engineering, and producing Sorters EXA systems for the detection and elimination of contamination in the spinning, nonwoven, and recycling industries. Application refers to natural, artificial, and synthetic carded fibers.

The EXA Sorter for Spinning includes state-of-the-art embedded technologies suitable to perform into the most critical industrial environment conditions. The system grants a high efficiency level in contamination detection and consistency on results.

The EXA Sorter for Nonwoven has been designed to monitor high throughputs. It assures a reliable control of the raw material before carding processes and significantly improves its quality.

The EXA Class is a data acquisition and contamination classification system. Furthermore, it provides important quality information on processing material.

The EXA Web system is an intelligent in-line vision control of nonwoven finished webs, giving a distribution mapping of the unwanted impurities. In combination with Sorter EXA improves the production and consequently the yield of the line.

Industry 5.0

EXA, within the textile value chain, offers the tools to create a valuable platform for companies to pursue business continuity, growth, and competitiveness. EXA, cutting-edge digital embedded technology along with human experience, helps to fill the competence gap in the production process.

E-mail: info@mariplast.com
Web: www.mariplast.com

Mariplast was founded in 1969 and since more than 50 years it's specialized in the field of plastic supports for the yarn industry. Today the range of products Mariplast includes more than 1,000 items for all the stages of processing yarn: spinning preparation, spinning (ring, open-end, selfacting), twisting, winding and yarn dyeing. For Mariplast, quality means to effectively respond to customer's needs. This attitude leads to innovation, research capabilities and product design, characteristics that coincide with the main strengths of the company.

Mariplast provides its customers with a wide choice of raw materials, starting from normal polypropylene, mainly used for the production of disposable tubes, up to special materials for the different types of technical applications to ensure the best mechanical and thermal resistance to high temperatures.

In addition to Mariplast Spa Montale (Pistoia), Mariplast North America Inc. in Greer S.C. USA was born in 1993. We also have productive collaborations in Spain, Egypt and Turkey.

MARZOLI

MARZOLI MACHINES TEXTILE S.R.L.

25036 PALAZZOLO S/OGLIO (BS)
Tel: +39 030 73091
E-mail: sales@marzoli.it
Web: www.marzoli.it

Marzoli is a textile engineering company which, over the past 10 years, has focused its efforts and resources on developing an exclusive concept that covers 4 separate but completely interconnected areas: Spinning Technology, Digital Textile, Nonwoven solutions and Circular Technology.

Spinning Technology represents our core business: thanks to extensive experience in each phase of the manufacturing process and the treatment of a vast range of fibers combined with the most advanced IIoT knowledge, Marzoli can offer expertly designed and digitized spinning solutions.

Nonwoven and Circular Technology are, for Marzoli, two areas characterized by continuous innovation: we constantly focus on studying new designs and developing cutting-edge technologies.

All this is joined by another essential resource: **Digital Textile**, that means the digitization and application of AI technologies that supports and make the development of these project possible, contributing to the constant improvement of machine performances.

Our mission has always been to ensure a product and service that meets customer expectations.

In 2022 we've opened an area dedicated to innovation within EUROPIZZI (MCS's dye house): INNOVATION BLUE AREA.

Here the new products, from MCS and TERMoeLETRONICA, are installed, tested, and made available to customers for all the necessary tests. Today there are installed:

CHRONOFLOW, HT rope dyeing machine with very low consumption; MULTIWASH-M, rope washing with super ecological impact, modular and configurable, DOUBLE JOGGER -C4 open-width discontinuous dyeing and preparation, with process time savings up to 50%.

Products technology-rich, innovation and reliability, are the result of continuous research and tests directly in the field.

MCS catalogue:

- High and low temperature rope dyeing machines
- Open width dyeing machines (jiggers and autoclaves) at high and low temperatures
- Preparation and washing lines in rope and open width

TERMoeLETRONICA catalogue:

- Systems for dosing liquid chemical auxiliaries
- Powder dosing systems
- Salt dosing systems
- SW management automation systems

Founded in 1952, based in Italy, Mesdan offers complete laboratory solutions for all the textile plants: spinning, weaving, knitting, dyeing and finishing mills. Equipment for testing the physical properties of fibres, yarns, fabrics and finished products (of the technical textile as well), and also for the colour fastness, and the dyeing assessment and formulation. All equipment are designed and manufactured to accomplish the international testing methods and can be supplied with official calibration reports.

Additionally, Mesdan is the leading manufacturer of all types of yarn joining devices like: mechanical knotters, automatic splicers for the Savio winders, and the hand-operated splicers for other winders, the doubling and twisting machines and for knitting and weaving applications (creels and looms).

Since 1931 Monti-Mac designs and manufactures 100% Made in Italy innovative solutions for the automation of the sewing process in the traditional and technical textile industry. Over the past twenty years, Monti-Mac has gradually dedicated more and more energy and resources in the research and development of solutions for the sewing, cutting and handling of traditional and technical textiles with particular attention to the following applications:

- preparation of fabrics to textile finishing with head-to-head joining seam and automatic roll handling
- selvedge preparation for digital printing with a patented fringe cutting system managed by digital cameras
- sewing, cutting and handling of technical textiles as GEOTEX, TNT, KEVLAR for the world of construction, defense, boating etc.

A concentrate of AUTOMATION, FLEXIBILITY, RELIABILITY and QUALITY which, combined with a POST-SALES service all over the world, assists the over 3000 customers who have today trusted our brand. The sale of SPECIAL HIGH QUALITY yarns dedicated to traditional use and in the most demanding work situations always guarantees the resolution of any process problem. Finally, thanks to the acquisition of an important Italian brand, today we are the ONLY manufacturer to make 100% Made in Italy PORTABLE SEWING MACHINES of recognized quality and reliability.

Pentek Textile Machinery designs, manufactures and services units for textile preparation and finishing since year 2000. With a current payroll of 62 people, PENTEK exports 80% of its production and manufactures in a new state-of-the-art plant on 10.000 m2 area. The plant is self-sufficient with green power station. Since many years the rate of R&D activities reaches an average of 12,6%. With a sales network of 53 agencies worldwide, we currently export 80%: 40% in Asia, 25% in Mediterranean area, 15% in the Americas.

Worldwide leader for innovative technologies, Pentek production is focused in 3 main sectors:

- ARI – dryers, continuous tumble dryers in open width and rope form
- WATER – continuous washing ranges in rope form, both with air jet and soft flow technologies
- STEAM – After printing steamers and flash agers

All products include substantial degrees of innovation and green technology, certified by international patents protections. The logic of a new technology inevitably starts from unsolved problems: this involves a huge effort in R&D together with our fabric technologists to develop new applications. We're certified Digital ready and we do Green labels are available for several innovative processes, with consistent and proven data.

This hard task enabled us to be recognized worldwide as true innovators and reliable partners, boosting our business in a non-stop growth up to the current 18 mio € turnover.

With over 75 years of innovation, research, and technological excellence, EFI Reggiani (which includes the Reggiani Macchine, Mezzera, Jaeggli and Inèdit Software brands) is a worldwide provider of complete solutions for the textile market, with a focus on the development of sustainable processes. With the high quality and performance of its machines and outstanding service to its customers, today EFI Reggiani is the premiere manufacturer of traditional and digital printing machines and pre-post treatment machines (such as denim lines, washing systems, bleaching and dyeing). EFI Reggiani delivers an overall solution for the textile process, from yarn treatment to fabric printing and finishing. Furthermore, the Inèdit product portfolio features proven, highly advanced workflow solutions for textile profiling calibration, design integration and much more. EFI Reggiani designs, manufactures, sells, and services high-quality machines across the globe for various substrates and applications (fashion, home, textile, sportswear, signage, and outdoor). EFI Reggiani's innovations are the result of extensive research targeted to improve productivity and quality, optimize the textile manufacturing process, and reduce energy and water consumption, as well as environmental impact.

Salvadè is a family business founded in 1967, now in the second generation. The passion for innovation, creativity supported by a strong enthusiasm, but always in the tradition of our fathers, represent fundamental values for Salvadè. These principles form the basis of our mission: to ensure full customer satisfaction. The production process is a continuous path of evolution and improvement. In a competitive environment like the one we face today, the use of cutting-edge tools and constant cooperation with our first rank customers are of fundamental importance. This approach enables us to continuously raise levels of specialization and competence. The growing need to pay attention to sustainability and respect for the environment has led us to rethink all stages of the production process, making a rigorous and meticulous quality control essential in every step. Staff training and fidelization is another crucial aspect, now more than ever. Thanks to the collaboration and cohesion among the members of the Salvadè team, an ideal environment has been created that promotes our commitment to excellence and continuous improvement of the quality of our products. In almost sixty years of industrial history, Salvadè has offered a variety of customized solutions for the different needs of a complex sector such it is the textiles one, leading us to concentrate our specializations on three product lines:

- After printing steaming solutions for every type of fabric, printed in any technique and with any class of dyestuff.
- Drying/tumbling solutions, through different combinations of our three machines: AMV, Mach5 and MarFa.
- Fancy Solutions for the production of special finishes oriented to the fashion sector.

Established in 1978, Stalam is the world leader in the development, design and manufacture of Radio Frequency (RF) equipment for the drying and thermal processing of raw materials, intermediates and finished industrial products. The drying of textile fibres and yarns, technical-textiles is the best known and most widespread application of Stalam's Radio Frequency equipment.

Stalam offers the widest and most advanced range of industrial Radio Frequency drying and thermal processing equipment, which enable their users to obtain the maximum benefits from the RF technology in terms of quality of the finished products, reduced operating costs, high flexibility and reliability. More than 2500 Stalam machines are in operation in more than 60 countries, having rated output power values ranging from 3 to 450 kW; from the simple, manually operated machine, to the fully automated line complete with computerised control and supervision systems.

Exporting more than 95% of its products to the five continents, Stalam provides professional and prompt commercial and technical assistance in all relevant industrial areas around the world, thanks to its well-structured sale and servicing organisation.

Zanfrini srl is located in Como which has long been famous for silk fabrics. They are leader in the Italian and International market since 1948 and already the third generation is active in the business.

The company is a weaving reed manufacturer and the range of his items covers and kind of weaving machine and any kind of fabric:

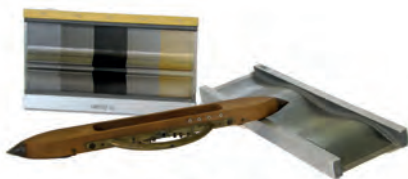

- clothing
- furnishing
- technical fabrics
- filtration

We are specialized in the production of:

- Flat Reeds: Reeds for rapier /projectile/ shuttle/ water jet looms
- Air-jet Reeds: Reeds for all kind of looms.; high efficiency and energy saving in weaving process. Development cooperation with leading loom manufacturers •
- Double Reeds Available for both rapier and air-jet looms
- Warping Combs: Combs for warping, leasing reeds comb, "V" reeds, expansion system and zig zag reeds
- Special reeds: made according to customers' special requests

Our research and development department investigates the materials and performance of our products on a daily basis; Reed wire- Reed dents selected throught internal analyzes on steels, Hardness analysis (longer reed life) , Roughness analysis (to reduce filamentation).

Zanfrini srl guarantee the best in quality, delivery time and efficacy in the after-sale service. Thanks to their experience in this field, they are recognized to be nowadays a worldwide leader second to none in the production of weaving reeds.

The Cassina Rizzardi plant is a reference in Italy for fabric printing with a production capacity that can reach over 100,000 meters a day thanks to the various technologies installed, including: digital printing, screen printing, roller printing, Lario printing, heat transfer printing and digital opaque pigment printing.

In addition to the printing department, SCR has a department for preparation for printing, steaming, washing and various finishing machines. SCR has its own quality laboratory to guarantee and verify the quality required by the most strict sector's standards.
