E-mail: italy@autefa.com
Web: www.autefa.com

AUTEFA Solutions Italy is a leading card manufacturer. The company combines in Biella famous Italian card manufacturers, OCTIR and F.O.R. AUTEFA Solutions is a full-line supplier for all leading nonwoven technologies., starting from bale opening, to carding, crosslapping, needling, hydroentangling and thermobonding, up to finished products on a one stop shopping basis. All process steps base on well-known and worldwide approved technologies which are integrated in turnkey solutions. The company combines the technology of the former companies Fehrer, F.O.R, OCTIR, AUTEFA and Strahm. AUTEFA Solutions nonwovens lines meet customers' requirements for quality web formation, bonding, active weight regulation, and minimal maintenance requirements.

With a history of more than 100 years in card production and the successful supply of more than 6000 cards all over the world, today AUTEFA Solutions Italy is a preferred partner in supplying cards with the most advanced mechanical and electronic technologies, always fully designed and manufactured in Italy.

Biancalani: Italian Excellence in Textile Machinery

Biancalani is an Italian company in the textile machinery field, dedicated for over 60 years to designing and manufacturing machines for the preparation and finishing of fabrics. With 95% of our production destined for export, we bring Italian innovation and excellence to the global textile industry.

Our company consistently offers original and effective solutions for the preparation and finishing of woven, non-woven, and knitted fabrics, tailored to a wide range of applications, compositions, and constructions. The entire Biancalani team is united by a single goal: delivering maximum customer satisfaction.

Our Pride and Distinction

We take great pride in the reliability of our solutions and production lines, as well as the customer service we provide before, during, and after every sale. Biancalani boasts local service centers in major textile regions worldwide: the United States, South America, Europe, Turkey, India, China, and Indonesia. This network offers a real advantage to our customers, saving time and ensuring immediate support when needed.

Furthermore, our commitment to innovation is protected by more than 50 international patents. These patents safeguard the quality of our technological advancements, securing not only our interests but also those of our customers.

Expert Support Worldwide

Backed by years of experience, our ultra-specialized local technicians are part of an extensive network of over 40 agents worldwide. They are trained to handle any situation, from installation to startup of Biancalani machines, as well as resolving potential complications. Our technicians are always available to ensure seamless operations for our clients.

TClab: Your In-House Technology Partner

Our in-house technology department, TClab, is always ready to conduct tests on customer fabrics and provide expert consultation on processing recipes, helping our clients achieve superior results.

Biancalani combines decades of experience with innovative solutions to continually support and advance the processes of fabric preparation and finishing for the global textile industry.

For 50 years, Bianco® has been designing and manufacturing machinery with advanced technology for textile finishing, for the technical textile industry and for the non-woven sector. Founded in 1974, Bianco® is still a dynamic company, with a wealth of history and professionalism. It employs designers with great experience, passion, absolute dedication and unparalleled technical competence.

With over 40,000 installations worldwide and 30 registered patents, Bianco® proudly reaches 50 years excellence in textiles in 2024.

Bianco® offers a range that boasts more than 10 families of machines and accessories for the textile sector, entirely designed and manufactured in Alba (CN), within the TCN Group® industrial center. The Bianco® reality is a qualified expression of Made in Italy, always at the forefront with its research and development department, constantly engaged in experimenting with new products, with an increasingly high technological value.

COLOR SERVICE

COLOR SERVICE S.R.L.
Via Divisione Julia, 15
36031 DUEVILLE (VI)
Tel: +39 0444 366000
E-mail: sales@colorservice.net
Web: www.colorservice.netm

Established in 1987, Color Service is an Italian company, leader in the development and production of automatic dispensing systems. The company was the first one in the world to introduce during ITMA 1987, the first automatic dosing system for powder dyestuff for textile industry, changing considerably the approach of the textile world towards automation.

Over the years the range of Color Service automatic dosing systems became larger, up to the production of dosing systems for liquid auxiliaries, powder dyes (in production and laboratory), for dyeing and printing houses. Color Service is also specialized in the automatic management of continuous dyeing cycles, in foulards and finishing.

Color Service engineering and production take place in our 3 premises (total production area 15.000 sqm, with 160 people working) and they are entirely Made in Italy, a unique feature that is synonymous with cutting-edge systems and high technology. In order to transform these concepts into machinery, Color Service rely on an R&D Department focusing on the constant upgrade of existing products as well as on the creation of new ones that, thanks to Color Service's capillary presence in the worldwide network, are thought of, designed and manufactured according to the actual needs of their Clients.

CORINO

CORINO MACCHINE S.P.A.
Strada Statale 231
12066 MONTICELLO D'ALBA (CN)
Tel: +39 0173 440576
E-mail: corino@corinomacchine.com
Web: www.corinomacchine.com

Born in 1983 by Mr. Roberto Corino, the current president, Corino Macchine has in short imposed itself in the dyeing and finishing sector worldwide with a unique and inimitable influence, by revolutionizing the processes related to the fabric handling and treatment.

The innovative technical solutions, the performances and the reliability of machines such as the pin wheel weft straightener ("SUPER N"), of devices such as the detwister or the slitting basket (just to name a few): all these elements have made Corino Macchine the reference point for the entire textile machinery sector. In addition, a production that has always been 100% made in Italy and a special attention to client needs and requests have consolidated during the years an undisputed leadership, confirmed by the number of clients and their worldwide spread.

The company's product range is wide, ranging from simple devices like expanders and centering systems, up to complete lines, like opening slitting line ("SUPERSLIT") or tubular squeezer (ST4). Furthermore, we also produce machines for any kind of fabric, ranging from the knitted to woven, up to technical fabrics and non-woven fabrics.

It's about a history of ideas, courage and engagement, which is now continuing with the second generation of Corino family.

Cubotex was born in 1984 after the invention of a new internationally patented machine for dyeing hosiery and stockings. After becoming world leader in this particular field, since the early 90s, the company started the production of today's core business: dyeing machinery for bobbins, tops, fiber, tow and hanks (skeins). Continuous technical innovations and research brought to deposit several patents and make of all Cubotex customers partners in development and research of excellence in the machinery design and performance.

DANITECH ENGINEERING AND SOLUTIONS

DANTI PAOLO is a manufacturer of textile finishing machines, specialized in surface finishing machines for fabrics. Our products are:

- RAISING MACHINES
- SHEARING MACHINES
- POLISHING MACHINES
- SUEDING MACHINES

We design our machines with 3D CAD workstations with more than 85 years of experience, always in close relationship with our customers to be able to catch the new trends of the market and in co-operation with experts and technologists to have always state of the art solutions.

Our machines are manufactured in our plant in Italy, where they are assembled by expert mechanics and are fully tested in working conditions, before delivery.

We are equipped with a vast park of machines tool, such as turning lathes, drilling, milling machines, welding and coating, ensuring the highest quality on every phase of manufacturing.

We deliver our machines, accessories and spare parts all over the world, by sea, road, rail ... and sometimes by air, too, making sure your consignment will reach you in time and in perfect conditions.

Thanks to our technicians, some of them also residing in our main markets abroad, we can ensure installation and after sales service to our machines, worldwide.

24040 STEZZANO (BG)

Tel: +39 035 2050711

E-mail: commerciale@erhardt-leimer.com

Web: www.erhardt-leimer.it

Erhardt+Leimer is the Italian subsidiary of an internationally oriented, privately owned group of companies founded in 1919 with its head office in Augsburg, Germany.

E+L operates in the textile market as a worldwide leading supplier of guiding, tensioning and measurement systems; over the years, thanks for its know-how in engineering, design and product, the Italian subsidiary has become the centre of competence for the production of machines and complete lines. Erhardt+Leimer Srl Italy studies and designs standard machines and customized solutions, from simple to complex projects: for example, ELSTRAIGHT the straightening system that makes sure to keep textile webs free of weft distortions; ELCOUNT the camera system to detect and control density or shrinkage in fabrics; ELCLEAN, the dedusting system which works with a mix of brushes and air blades that eliminate different contaminations like dust and fluff from textiles, coated and coagulated, cork and reel material and SDM our system application for textile tube fabrics with a drop stitch. This is how the precision and quality of a 100% German brand are founded in the Stezzano facility with the avant-garde vision of totally Made in Italy products, a combination that guarantees reliability and flexibility to customers worldwide.

21056 INDUNO OLONA (VA)

Tel: +39 0332 203037

E-mail: etv@etvsrl.com

Web: www.etvsrl.com

ETV Elettronica Tessile Varese started our business more than 50 years ago, developing the first inventive measuring instruments to assess residual moisture and to determine shrinkage speed in yarns and fabrics.

And all this with electronics which we would now look as “primitive”. Today we set up close relationships with many international manufacturers dealing with staple and finished textiles.

Thanks to a combination of skilled technicians and all the use of advanced technology, we are in a position to solve, in a targeted and precise way, any problem put forward by our customers in the textile industry.

As a company, we deal with the design, implementation, testing and installation of our own equipment, as well as related sensors and the after-sales assistance. In particular devices for on-line measurement of the residual moisture of the fabric and yarn, and the temperature of the fabric and the exhaust air.

The oldest company leader in the production of precision winder machines, still owned and run by the same family and producing 100 % Made in Italy !

Fadis was founded in 1960 with the purpose of manufacturing textile machines such as rewinders, soft winders, assembly winders, hank to cone winders, reeling machines, spooling machines, cops winding machines, air covering machines and air texturing machines which are meant to process all types of yarns such as cotton, wool, silk, artificial fibres, synthetic fibres, mixed fibres, intermingled yarns, fancy yarns.

Fadis is present in more than 70 countries all over the world. The last generation of precision winding machines clearly shows the importance we give to innovation, research and development of new models, new products, new materials, new technologies and with introduction of automation with cobot to enhance end user efficiency and productivity. All Fadis machines are "Digital ready" with a maximum recyclability potential of more than 80 %.

Since 1951 world leader in the production of finishing equipment for woven and knitted fabrics open and tubular, compactors unit, sanforizing lines, calenders and open width de-oiling and scouring units.

Always focused on innovation, we have introduced a number of new models such as **FerrSonic**, the scouring and oil removal unit which utilizes customized ultrasound technology, specifically designed for continuous washing process such as scouring, that boosts the cleaning power of the water in the washing treatment, achieving an amazing reduction of chemicals used (up to 65%!) and up to 30% to 50% less water with a shorter washing time. Or again, like the innovative Vacuum **Self-Cleaning Strainer** (SCS), a new advance technology continuous filtering system capable to clean the whole batch of the washing tank every single minute, equipped also with a special compact oil separator device to drain out all the removed impurities.

Machines designed and built to last, where innovation and energy efficiency have always been our main lines of development.

Since 1977, the IMA brand has been synonymous with excellence and innovation in the Clothing Industry machinery sector.

With over forty-eight years of experience, we have strengthened our position as a leader both nationally and internationally, offering advanced cutting and spreading machines, fabric rolls handling and management systems, layers labelling, as well as digitalization solutions and textile CAD system, and dedicated software to optimize the organization of the Cutting Room. Our solutions now extend well beyond the fashion and clothing sector, encompassing the nautical, furniture, automotive, and medical fields.

Thanks to our extensive experience, combined with the freshness and dynamism of a young and highly motivated team, we continue to pave the way of innovation. We were pioneers of digital technology with the launch of the first full-digital electronic spreader in 2013, and today we are a leader in Industry 4.0 with a fully digitalized, automated, and interconnected Cutting Room. Our technology not only optimizes performance and reduces consumption, but also aims at a sustainable resource use, placing a strong emphasis on environmental responsibility and the future.

LAFER

LAFER S.P.A.
Via Lago di Garda, 98
36015 SCHIO (VI)
Tel: +39 0445 694320
E-mail: sales@laferspa.com
Web: www.laferspa.com

Lafer's objective is to create finishing machines with premium build quality that control fabrics with the highest precision.

Together with mechanical engineering, Lafer's in-house electronic and software development team always strive for more advanced integration of moving parts, electronics and operating software.

- Lafer raising machines have the highest productivity.
- Shearing machines have custom made shearing groups to maximize cutting precision.
- Various versions of felt compactors also integrated with mechanical metal shoe type compacting modules maximize setting precision of compaction action and preserve the original 3D knit fabric appearance or if preferred a rubber belt sanforizing unit will give a flatter look with more lustre.
- Lafer supplies different versions of sueding machines for knits and wovens for finer or more dense (warmer) effects.

Various wet finishing processes have also been developed:

- Wet sueding for the smoothest (cleanest) effect.
- Open width enzyme treatment for a more uniform and effective results than rope form processing.
- Closed loop waterless scouring for 100% synthetic stretch fabric with zero discharge
- Liquid ammonia mercerizing with versions for knits and wovens. Lafer continues to seek the most precise control of fabric tension management, finishing parameters and transport to improve quality.

LAIP is an innovative Italian company based in Prato that has been manufacturing dyeing machines for over 60 years. We design and realize both single machines and complete systems for dyehouses. Our specialized personnel and engineers deal with: mechanical and electrical design, structural simulation, calculations and certification for pressure equipment, software development. Our machines can be divided into two macro categories: **fabric** dyeing and **yarn, fiber and tow** dyeing. For each category we have dedicated products to treat different types of fabric and fiber according to specific requests or needs from our customers. Machines for small productions or laboratory are also available. To meet new market demands for sustainability, we have developed textile processing machines for textile recycling.

Lauer is an example of Italian excellence, a worldwide leader in the development of industrial dosing systems with over 50 years of experience in the field. Our firm was established in 1970 in the district of Biella, heart of the Italian textile industry, historical home to various enterprises well known for the manufacturing of finest quality cloths and fabrics. This provided the perfect environment for our growth and shaped our mission from the very beginning: the development of highest quality and efficient dosing solutions combining safety and sustainability.

Our constant investments in R&D and modern technologies have led us to the pioneering of novel and reliable dispensing systems, which coupled to our flexible and effective support and technical service, have won us the trust of several renowned textile firms at international level. Currently there are over 2600 Lauer automated dosing systems installed and operating around the world.

Our systems guarantee high accuracy, daily repeatability and maximum efficiency in all the dosing and dispensing operations of colors and products, in both powdery and liquid forms, found across many dyeing and finishing textile processes. Lauer's entire production is "100% Made in Italy" and based in Cossato (Biella district) where 120 highly skilled technicians and engineers are contributing to the realization of our mission supported by some of the most modern and advanced manufacturing technologies.

Loptex specializes in designing, engineering, and producing Sorters EXA systems for the detection and elimination of contamination in the spinning, nonwoven, and recycling industries. Application refers to natural, artificial, and synthetic carded fibers.

The EXA Sorter for Spinning includes state-of-the-art embedded technologies suitable to perform into the most critical industrial environment conditions. The system grants a high efficiency level in contamination detection and consistency on results.

The EXA Sorter for Nonwoven has been designed to monitor high throughputs. It assures a reliable control of the raw material before carding processes and significantly improves its quality.

The EXA Class is a data acquisition and contamination classification system. Furthermore, it provides important quality information on processing material.

The EXA Web system is an intelligent in-line vision control of nonwoven finished webs, giving a distribution mapping of the unwanted impurities. In combination with Sorter EXA improves the production and consequently the yield of the line.

Industry 5.0

EXA, within the textile value chain, offers the tools to create a valuable platform for companies to pursue business continuity, growth, and competitiveness. EXA, cutting-edge digital embedded technology along with human experience, helps to fill the competence gap in the production process. mission supported by some of the most modern and advanced manufacturing technologies.

Mariplast was founded in 1969 and since more than 50 years it's specialized in the field of plastic supports for the yarn industry. Today the range of products Mariplast includes more than 1,000 items for all the stages of processing yarn: spinning preparation, spinning (ring, open-end, selfacting), twisting, winding and yarn dyeing. For Mariplast, quality means to effectively respond to customer's needs. This attitude leads to innovation, research capabilities and product design, characteristics that coincide with the main strengths of the company.

Mariplast provides its customers with a wide choice of raw materials, starting from normal polypropylene, mainly used for the production of disposable tubes, up to special materials for the different types of technical applications to ensure the best mechanical and thermal resistance to high temperatures.

In addition to Mariplast Spa Montale (Pistoia), Mariplast North America Inc. in Greer S.C. USA was born in 1993. We also have productive collaborations in Spain, Egypt and Turkey.

Marzoli is a textile engineering company which, over the past 10 years, has focused its efforts and resources on developing an exclusive concept that covers 4 separate but completely interconnected areas: Spinning Technology, Digital Textile, Nonwoven solutions and Circular Technology.

Spinning Technology represents our core business: thanks to extensive experience in each phase of the manufacturing process and the treatment of a vast range of fibers combined with the most advanced IIoT knowledge, Marzoli can offer expertly designed and digitized spinning solutions.

Nonwoven and **Circular Technology** are, for Marzoli, two areas characterized by continuous innovation: we constantly focus on studying new designs and developing cutting-edge technologies.

All this is joined by another essential resource: **Digital Textile**, that means the digitization and application of AI technologies that supports and make the development of these project possible, contributing to the constant improvement of machine performances.

MCS S.p.A. is at the head of a mechanical-textile group that begins its activity in the 60s. It includes TERMOELETTRONICA and EUROPIZZI. Our mission has always been to ensure a product and service that meets customer expectations. In 2022 we've opened an area dedicated to innovation within EUROPIZZI (MCS's dye house): INNOVATION BLUE AREA. Here the new products, from MCS and TERMOELETTRONICA, are installed, tested, and made available to customers for all the necessary tests. Today there are installed: CHRONOFLOW, HT rope dyeing machine with very low consumption; MULTIWASH-M, rope washing with super ecological impact, modular and configurable, DOUBLE JOGGER -C4 open-width discontinuous dyeing and preparation, with process time savings up to 50%. Products technology-rich, innovation and reliability, are the result of continuous research and tests directly in the field.

MCS catalogue:

- High and low temperature rope dyeing machines
- Open width dyeing machines (jiggers and autoclaves) at high and low temperatures
- Preparation and washing lines in rope and open width

TERMOELETTRONICA catalogue:

- Systems for dosing liquid chemical auxiliaries
- Powder dosing systems
- Salt dosing systems
- SW management automation systems

Since 1931 Monti-Mac designs and manufactures 100% Made in Italy innovative solutions for the automation of the sewing process in the traditional and technical textile industry. Over the past twenty years, Monti-Mac has gradually dedicated more and more energy and resources in the research and development of solutions for the sewing, cutting and handling of traditional and technical textiles with particular attention to the following applications:

- preparation of fabrics to textile finishing with head-to-head joining seam and automatic roll handling
- selvedge preparation for digital printing with a patented fringe cutting system managed by digital cameras
- sewing, cutting and handling of technical textiles as GEOTEX, TNT, KEVLAR for the world of construction, defense, boating etc.

A concentrate of AUTOMATION, FLEXIBILITY, RELIABILITY and QUALITY which, combined with a POST-SALES service all over the world, assists the over 3000 customers who have today trusted our brand. The sale of SPECIAL HIGH QUALITY yarns dedicated to traditional use and in the most demanding work situations always guarantees the resolution of any process problem. Finally, thanks to the acquisition of an important Italian brand, today we are the ONLY manufacturer to make 100% Made in Italy PORTABLE SEWING MACHINES of recognized quality and reliability.

MorganTecnica, founded in Italy in 2008 by Fabrizio and Federica Giachetti with the collaboration of their father Franco, is today a successful multinational group that proudly maintains all research, development, and production entirely “Made in Italy.”

Over its 18 years of activity, MorganTecnica has faced numerous challenges with determination, becoming a benchmark not only in the apparel industry but also in the furniture and automotive sectors. Today, we offer the most comprehensive range of machinery and software solutions dedicated to the cutting room. We produce innovative technology and export our systems worldwide, supporting companies in the fashion, furniture, and automotive industries that aim to be increasingly organized, efficient, and competitive. Our production includes various types of systems for roll loading and handling, spreading tables, labelers, and automatic cutting machines with different lay heights, both single-layer and multi-layer.

Thanks to our experience and a solid internal software hub, we develop advanced solutions through a dedicated R&D department, such as Mastermind — our platform for cut order planning — and CAD projects.

MS Printing Solutions, with headquarters in Guanzate- Italy, is a leader in the production of industrial digital textile printing machines, both scanning and single pass ones. To become a leader, a long, full of experience and passion journey has been done. Tradition is very important for us; it would be impossible to innovate without a deep knowledge about the origins of a product, the history of a market. Our modern technologies allow us to improve any aspect of textile printing, starting from performance up to the most important environmental issues. The versatility of these digital technologies also opens the way to different printed applications such as paper and plastic substrates.

Quality and reliability are a matter of details. We work hard day-by-day going deep into each process step to maintain our high-standard reliability criteria. Only always staying one step ahead, we can drive the tech change. We have done this with LaRio single pass; we will do it again finding today the innovative solutions to meet tomorrow's demands. Sustainability is our duty. Developing sustainable technologies is our responsibility towards future generations.

Pugi Group has been manufacturing automatic fabric joining and sewing machines and preparation lines for the textile industry 100% made in Italy since 1956 with particular attention to the following application :

- Automatic sewing machine to join end-to-end tubular fabric , single or double fabric lines with automatic system for handling rolls.
- Bagging sewing machine for milling and dyeing process for knit or woven fabrics.
- Batching machine for open width fabric with rail sewing device with conveyor device for rolls transportation.
- Optical digital system for on-line defect detection for tubular raw fabric and open width fabric.

Our vast experience at a worldwide level, acquired over all these years, allows us to design and manufacture machine and innovative solutions with high technology standards , all in house manufactured.

Without a doubt, Pugi Group is today among world leaders in the manufacturing of automatic fabric sewing machines synonymous to reliability and high customer service standards.

ROJ was founded in 1965 in Biella, in the main district for wool processing; and its skills are concentrated in the insertion of the weft and in the control of the weaving looms.

Experience and knowledge on:

- materials and surface treatments,
 - optical, piezo-electric and piezo-resistive sensors to detect the presence, movement and characteristics of the yarns,
 - servo-motor controls,
 - management of signals and communication with the weaving machine,
- make ROJ, worldwide, synonymous of quality weft feeder.

Due to research and development, in a close relationship with our customers, Roj offers a comprehensive range of equipment designed to meet the ever-growing demands of the textile industry

Our accessories are tools to further optimize feeder performance and bring the weft insertion to the highest level to ensure the highest quality of your woven product.

The product program covers everything needed to improve tension and yarn balloon control, and includes sensors for the detection of knots, yarn breaks and bobbin switch-over, and also a range of accessories for lubricating the yarn.

Web: www.salgroup.it

Established in 1963, Salmoiraghi designs, manufactures and installs a wide range of integrated systems and specialised equipment for automated handling, in-plant transport systems and automated storage of industrial products. The key application fields are factory in-house transport systems for raw materials, components and finished products, bulk (end-of-line) packing systems, automated warehouses and logistics distribution centres. Over sixty years of specialisation and accumulated know-how enable us to offer a comprehensive range of automation solutions for any industrial sector and plant size.

WHAT WE MANUFACTURE:

- Automated handling and storage systems
- Automated warehouses for pallets and fabric rolls
- Automated logistics terminals
- Internal material handling and storage systems for industrial plants
- Overhead monorail transport systems
- Various types of conveyors and inertially guided vehicles for load units transport
- End-of-line packing systems
- Automated quality inspection systems using advanced AI technologies for yarn bobbins
- Systems for doffing, transport and packing of synthetic yarn bobbins
- Machine control and plant supervision software
- Factory Automation systems

Salvadè is a family business founded in 1967, now in the second generation. The passion for innovation, creativity supported by a strong enthusiasm, but always in the tradition of our fathers, represent fundamental values for Salvadè. These principles form the basis of our mission: to ensure full customer satisfaction. The production process is a continuous path of evolution and improvement. In a competitive environment like the one we face today, the use of cutting-edge tools and constant cooperation with our first rank customers are of fundamental importance. This approach enables us to continuously raise levels of specialization and competence. The growing need to pay attention to sustainability and respect for the environment has led us to rethink all stages of the production process, making a rigorous and meticulous quality control essential in every step. Staff training and fidelization is another crucial aspect, now more than ever. Thanks to the collaboration and cohesion among the members of the Salvadè team, an ideal environment has been created that promotes our commitment to excellence and continuous improvement of the quality of our products. In almost sixty years of industrial history, Salvadè has offered a variety of customized solutions for the different needs of a complex sector such it is the textiles one, leading us to concentrate our specializations on three product lines:

- After printing steaming solutions for every type of fabric, printed in any technique and with any class of dyestuff.
- Drying/tumbling solutions, through different combinations of our three machines: AMV, Mach5 and MarFa.
- Fancy Solutions for the production of special finishes oriented to the fashion sector.

Web: www.santoni.com

Created in 1919 Santoni is the very first Italian sock knitting machine manufacturer. In 1989 it became part of Lonati Group, which operates in several sectors, i.e, textile engineering, electronics, iron and steel manufacture, agriculture, financing, real estate, research and multi-utility and Instruction. In the last 20 years Santoni has developed a series of circular electronic "Seamlesswear" knitting machines becoming a worldwide leader in this technology. Seamless machines express a revolutionary concept in the textile sector. Their use, initially limited to the production of underwear, has been then extended to many other fields.

Recently, the experience on seamless knitting machines and the know-how on socks knitting machines have given birth to a brand new machine for the production of seamless uppers, which reduces waste to keep up with sustainability.

SINTEC TEXTILE

SINTEC TEXTILE S.R.L.
Via del Lavoro, 30
36016 THIENE (VI)
Tel: +39 0445 1670124
E-mail: info@sintectextile.com
Web: www.sintectextile.com

Sintec is a young company but with considerable technical background and long experience in the textile finishing sector. Founded in 2011, in a short time it designed and built a series of new machines, specializing in particular in the finishing of knitted fabrics. The design and construction of the machines are scrupulously handled according to a simple philosophy: doing things in the best possible way. Thanks to this, Sintec quickly established itself in all world markets. The notable expansion of production was possible thanks to the new headquarters in Thiene, where the new 3500 sqm factory was built on an area of over 10000 sqm.

BEST OF SINTEC

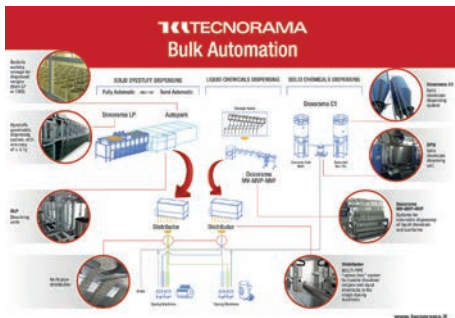

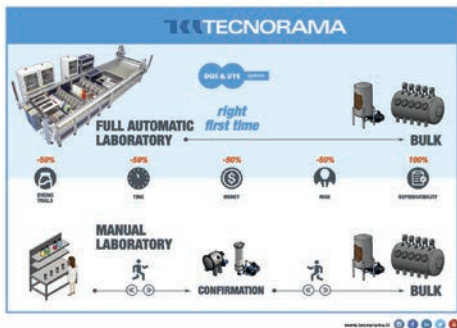

Sintec machines are equipped with innovative solutions and exclusive, patented accessories which allow you to obtain performances of the highest quality level. A3 SUPERCOMPACT: Sintec's innovation in knitting felt compactors (PATENTED SYSTEM) T2: tubular knitting compactor with exceptional performance. F4: brushing machine for "peach skin" finishing effect. Sanfor Superfinish: Sanfor rubber belt unit.

INNOVATIONS (EQUIPPED WITH PATENTS)

MICROTOUCH R212: innovative brushing machine with 2 high-speed drums and diamond rollers. EASYPOWER A1G: innovative unit with rubber belt with significantly superior performance to the felt unit. It is an eco-friendly sanfor with low maintenance.

TECNORAMA produces laboratory systems for the developing of the RIGHT RECIPE for bulk dyeing machines, in order to avoid correction and re-dyeing in production. The right recipe is developed thanks to the DOS&DYE®, which is a fully automatic system, reproducing in laboratory the whole dye-house and the dyeing operations. In addition to laboratory systems, TECNORAMA offers solutions for automatic dispensing of both liquid and solid dyes and chemicals for industrial dyeing and automatic dissolving systems with the transfer of dissolved products to the production machines.

UGOLINI

UGOLINI S.R.L.
Via Lago di Misurina, 18
36015 SCHIO (VI)
Tel: +39 0445 576110
E-mail: ugolini@ugolini.net
Web: www.ugolini.net

Eng. Umberto Ugolini founded Ugolini srl in 1970 after 25 years designing and construction at ILMA in Schio (Vicenza); Experience and knowledge along with decades of collaboration with the world's leading textile groups have allowed us to specialize in the construction of dyeing machines for small, medium and large production, with globally recognized quality.

Today the range of products is included in four main types: dyeing machines, laboratory, finishing and stainless steel accessories for dyeing; all summarized in the two institutional websites: <https://www.ugolab.net/> <https://www.ugolini.net/> Ugolini Srl completely manages the design and production phases: the main activities are in fact integrated within the company, to guarantee the constant quality of its products and respect for delivery times. All this to offer the customer not only the product that best suits his needs, but real advice by establishing a long-lasting partnership relationship.

This is also demonstrated by the world constantly customer number increasing. Ugolini Srl is strongly aimed at the international market with most of the turnover achieved abroad. Finally, quality is guaranteed by international certifications and approvals. The machines are designed and built according to the most varied standards: PED, ASME, TUV, ANFOR, SELO, etc.

UNITECH

UNITECH INDUSTRIES S.R.L.
Via Parugiano di Sotto, 41/43

WaterNext stands at the forefront of innovative water treatment solutions, specializing in the engineering, construction, and management of state-of-the-art plants for the textile industry. With a rich history spanning three decades, our expertise particularly shines in the areas of wastewater treatment/recovery and the implementation of Zero Liquid Discharge (ZLD) systems.

Our teams track record includes the successful deployment of over 500 plants globally, a testament to our deep-rooted knowledge and leadership in zero-discharge technology. This experience has positioned us as pioneers in the field, delivering not only exceptional environmental protection but also offering tangible benefits such as reduced operational costs, optimized space utilization, and enhanced durability of installations.

Central to our success are the cutting-edge technologies we employ, including 100% biological treatment processes, Membrane Bioreactor (MBR) systems, reverse osmosis, and advanced filtration using selective membranes. These innovations underscore our commitment to sustainability and efficiency.

WaterNext is a globally recognized brand with own companies in Italy, India and Mexico and a robust network of representative partners in over 20 countries worldwide.
