Italian Textile Machinery Strengthens Presence in Turkmenistan with High-Tech Focus

The Italian textile machinery industry is reinforcing its commitment to the rapidly evolving Turkmen textile sector through a strong participation at the upcoming TURKMEN TEXTILE EXPO 2026, scheduled from June 4–6 in Ashgabat. Coordinated by the Italian Trade Agency (ICE) and the Italian Textile Machinery Manufacturers Association, ACIMIT, the Italian delegation aims to further strengthen Italy's position as a leading technology partner for Turkmenistan's growing textile industry.

As one of the world's significant cotton-producing nations, Turkmenistan is actively investing in developing a fully integrated textile value chain capable of transforming raw cotton into high-value textile products domestically. This strategic vision creates increasing demand for advanced machinery, automation, and specialized manufacturing solutions.

Italy continues to play a pivotal role in this transformation. Italian textile machinery exports to Turkmenistan reached an impressive €13 million in 2023, reflecting the confidence of local manufacturers in Italian innovation and engineering excellence. Accessories, spinning machinery, and knitting equipment remain among the most sought-after technologies.

Industry leaders remain optimistic about future opportunities, particularly in plant modernization, technological upgrades, and specialized high-tech investments. Backed by continuous research and development, Italian manufacturers are delivering flexible, efficient, and sustainable solutions tailored to the needs of modern textile production.

The Italy Pavilion will showcase renowned companies including BIANCO, COLOR SERVICE, CORINO MACCHINE, DOVER INDUSTRIES ITALY, ITEMMA, M.C.S. OFFICINA MECCANICA, MARZOLI MACHINES TEXTILE, MESDAN, SALVADE', SAVIO MACCHINE TESSILI, and STALAM, while FERRARO will participate through its own dedicated stand.
